
DEAR FRIENDS AT FGI FINANCE,
WE HAVE AN UPDATE ON YOUR WATER PROJECT!

PROJECT OVERVIEW.

Country: **Uganda**
Project Type: **New Borehole**
Estimated People Served: **300**
Implementing Partner: **Concern Worldwide**
Status: **In Progress**
Estimated Completion: **Late 2014**

WHAT IS A BOREHOLE?

A professional team uses a drilling rig to tap into an underground aquifer, then caps the well with a hand or foot pump. These deep wells typically supply more water than hand-dug wells, but the projects are more expensive as they require heavy equipment, fuel and larger teams of skilled technicians.

THE COMMUNITY ENGAGEMENT PHASE.

Our local partner will form and train a local Water and Sanitation Committee (WATSAN) on best sanitation (use of latrines), hygienic practices, safe water storage and water point management. These efforts instill a sense of ownership and responsibility for the project.

PROJECT TIMELINE.

Thanks so much for your patience and support! The water project you funded in the Spring of 2013 is now in the construction and community engagement phase. Here's a summary of the progress we've made so far. We're excited to share the exact details of your project with you once it's completed!
